

Metal Detectable Bovine Weasand Clips

The Metal Detectable Bovine Weasand Clip provides a dependable and cost-efficient way to control ingesta with added line detectability.

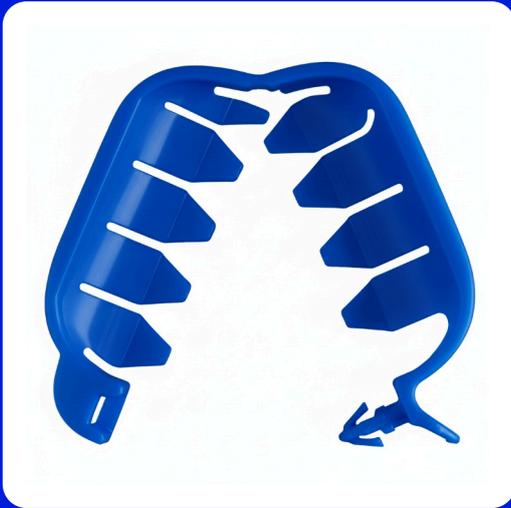

Placed on the oesophagus with the Rodder tool, it clears out ingesta and locks securely at the stomach. Now made from a detectable material, retained clips are instantly identified by standard metal detectors, protecting both the carcass and your downstream products.

Instantly identifiable by standard industry metal detection equipment, protecting rendering and pet food streams.

- ✓ Creates a tight seal on the weasand (esophagus) to stop leakage.
- ✓ Clears the esophagus as it is applied.
- ✓ High operational efficiency & ease of use.
- ✓ Helps maintain clean processing with less contamination.
- ✓ Approved for food contact in both FDA and EU standards.

Loose Clips

Our loose clips offer a practical and cost-effective solution for individual use. They are ideal for operations that require flexibility, manual application, or small-batch processing, while still delivering the same high-performance sealing reliability as our standard design.

Cartridge Clips (For Dispensers)

Our cartridge clips are arranged in organized multi-clip stacks for rapid loading into compatible dispensing systems. This format ensures faster workflow, improved hygiene, and maximum efficiency for high-volume processing environments.

Material	Food-grade metal detectable plastic
Applicator	Bovino Clip Rodder
Packaging	2000 clips per package
Package Dimensions	40cmx40cmx37cm

Material	Food-grade metal detectable plastic
Applicator	Bovino Clip Rodder
Packaging	2000 clips per package
Package Dimensions	29cmx40cmx39cm
